FOR IMMEDIATE RELEASE

### **HyperSizer.com Launches a New Online Community User Forum**

**Newport News, Virginia** – On June 15, 2008, *Collier Research Corporation* launched the first community user forum on its website, [www.HyperSizer.com](http://www.HyperSizer.com). Users can register for free and post questions, tips or suggestions, or just browse the multitude of information available. The forum not only answers common user questions, but will be used to announce new capabilities, and gather feedback from users on any improvements to this widely-used engineering software. Currently, information on software use, installation, analysis methods and project applications is available online. The new community user forum can be found at <http://www.hypersizer.com/faq> or by going to <http://www.hypersizer.com> and clicking on “Support”.

**HyperSizer** is used by aerospace industry leaders such as **Boeing, Lockheed Martin, NASA** to perform airframe weight optimization with traditional metallic materials and advanced composite laminates. HyperSizer is an engineering tool to be used by both designers and stress analysts. From preliminary design all the way to detailed final analyses, HyperSizer is used for system-level structural trade studies, detailed part sizing, and to generate margin-of-safety stress reports required for FAA certification and in-service support.

#### ***About the Company:***

**Collier Research Corporation** has provided methods research and software development to NASA and the aerospace industry since 1995. As the first company to license computer software from NASA Langley as part of the agency's effort to transfer technology to U.S. businesses, Collier Research Corp. strives to create engineering software that is robust, well supported, verified, intuitive, graphical, and highly productive for industry engineers.
